

I am very concerned with the contents in Docket 02-33. If I understand this correctly the results will be the elimination of free interprize within the Internet. I will be forced to use only those large companys with pre-formated utilities full of their advertisements and bias/slants. I will no longer be able to utilize data and information from the small ISP's that are not biased toward the wants and needs of the big guns. And how do I know this will happen?? The same way Walmart has moved into the little communities and forced out the little guy leaving us to shop at their stores because nothing is left but them. The small ISP's will be ligislated out of existance because they will not be able to financially compete with the big boys.
